BELT CONVEYORS
**CORRUGATED SIDEWALL BELT CONVEYORS** are primarily used for conveying on steep inclines over relatively short distances. Other advantages are:

- Convey a wide variety of products, including large, heavy lumps.
- Convey vertically, horizontally, and inclined, all in one conveyor.
- More compact.
- Lower cost.
- Less moving parts.
- Top covers and side panels can be provided for all conveyors to reduce dust emissions and for weatherproofing. Bottom covers are available but usually necessitate periodic cleanout of accumulated product.

**SLIDER BED BELT CONVEYORS** are suitable for conveying shorter distances with lower capacities and lighter duty. Advantages are:

- More compact.
- Lower cost.
- Less moving parts.

**TROUGHING IDLER BELT CONVEYORS** are highly efficient and reliable for conveying most bulk materials. The particular advantages are:

- Convey a wide variety of products, from fine powders to large lumps, from bottle caps to tires.
- Convey over a long horizontal distance with relatively low horsepower.
- Travel path can vary from horizontal to inclined to declined.
- Relatively quiet.
- Can convey vertically, horizontally, and inclined, all in one conveyor.

- Convey at very high capacities and high speeds.
- Load at multiple points along travel path.
- Gentle handling of products.

**HAWTHORNE-SEVING, INC.** manufactures a complete line of belt conveyors which are custom designed to meet your specific requirements.
